

Keyboards Host More Germs Than Public Toilets

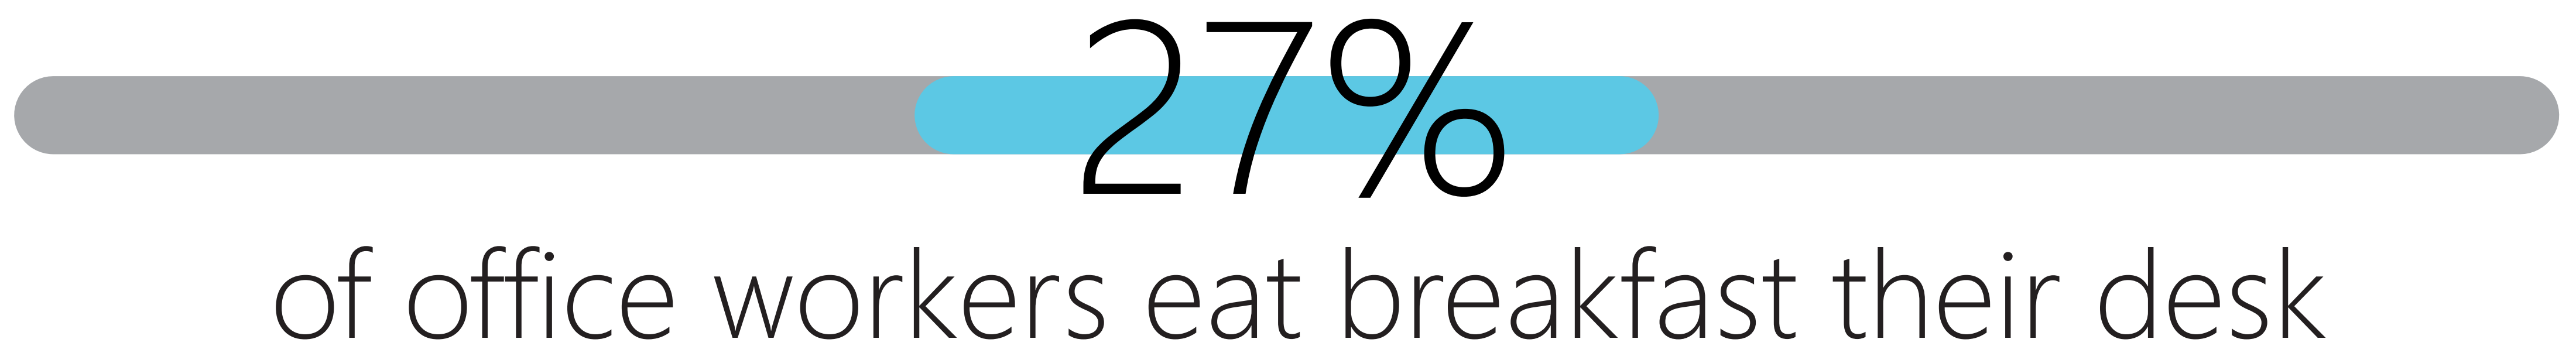

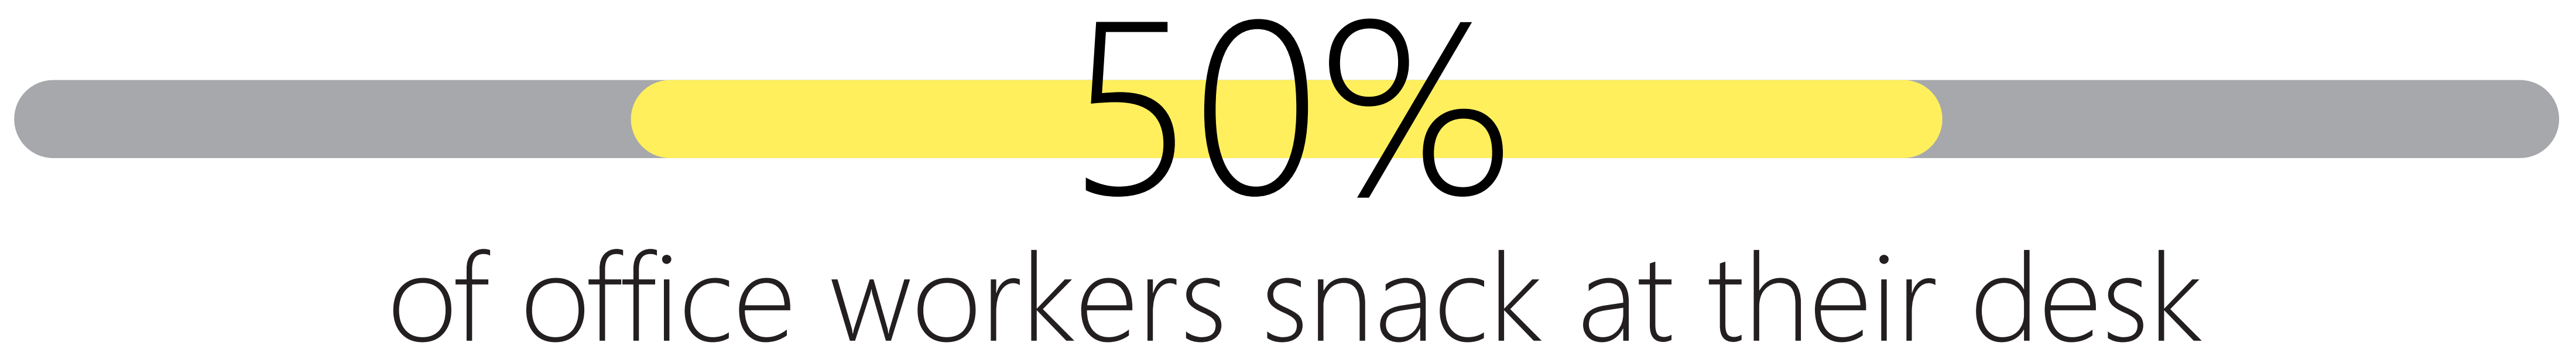

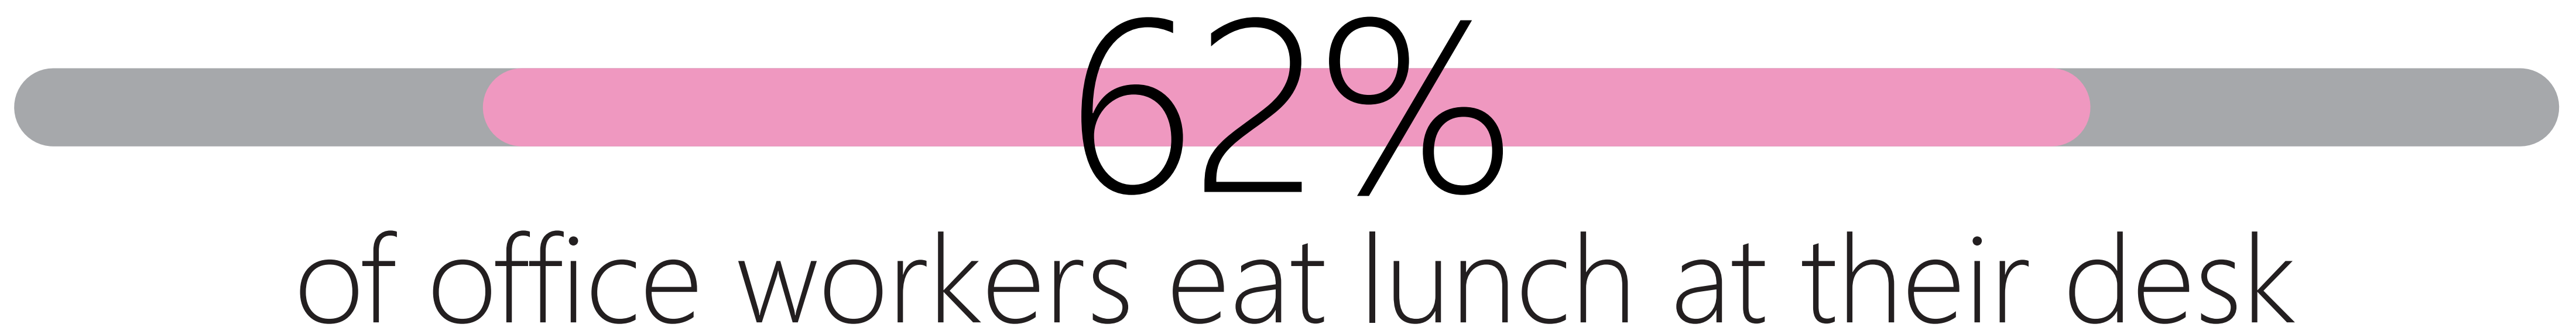

And Other Facts About
Workplace Hygiene

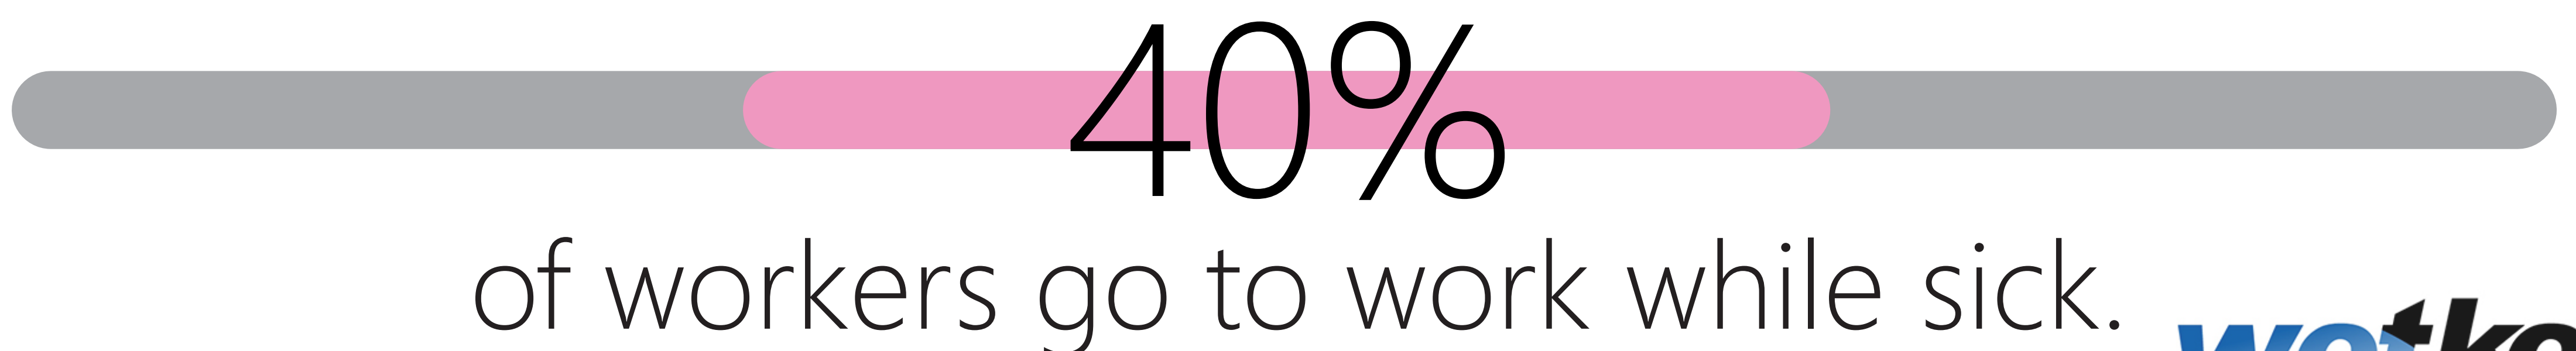

Keyboards host more germs than public toilets

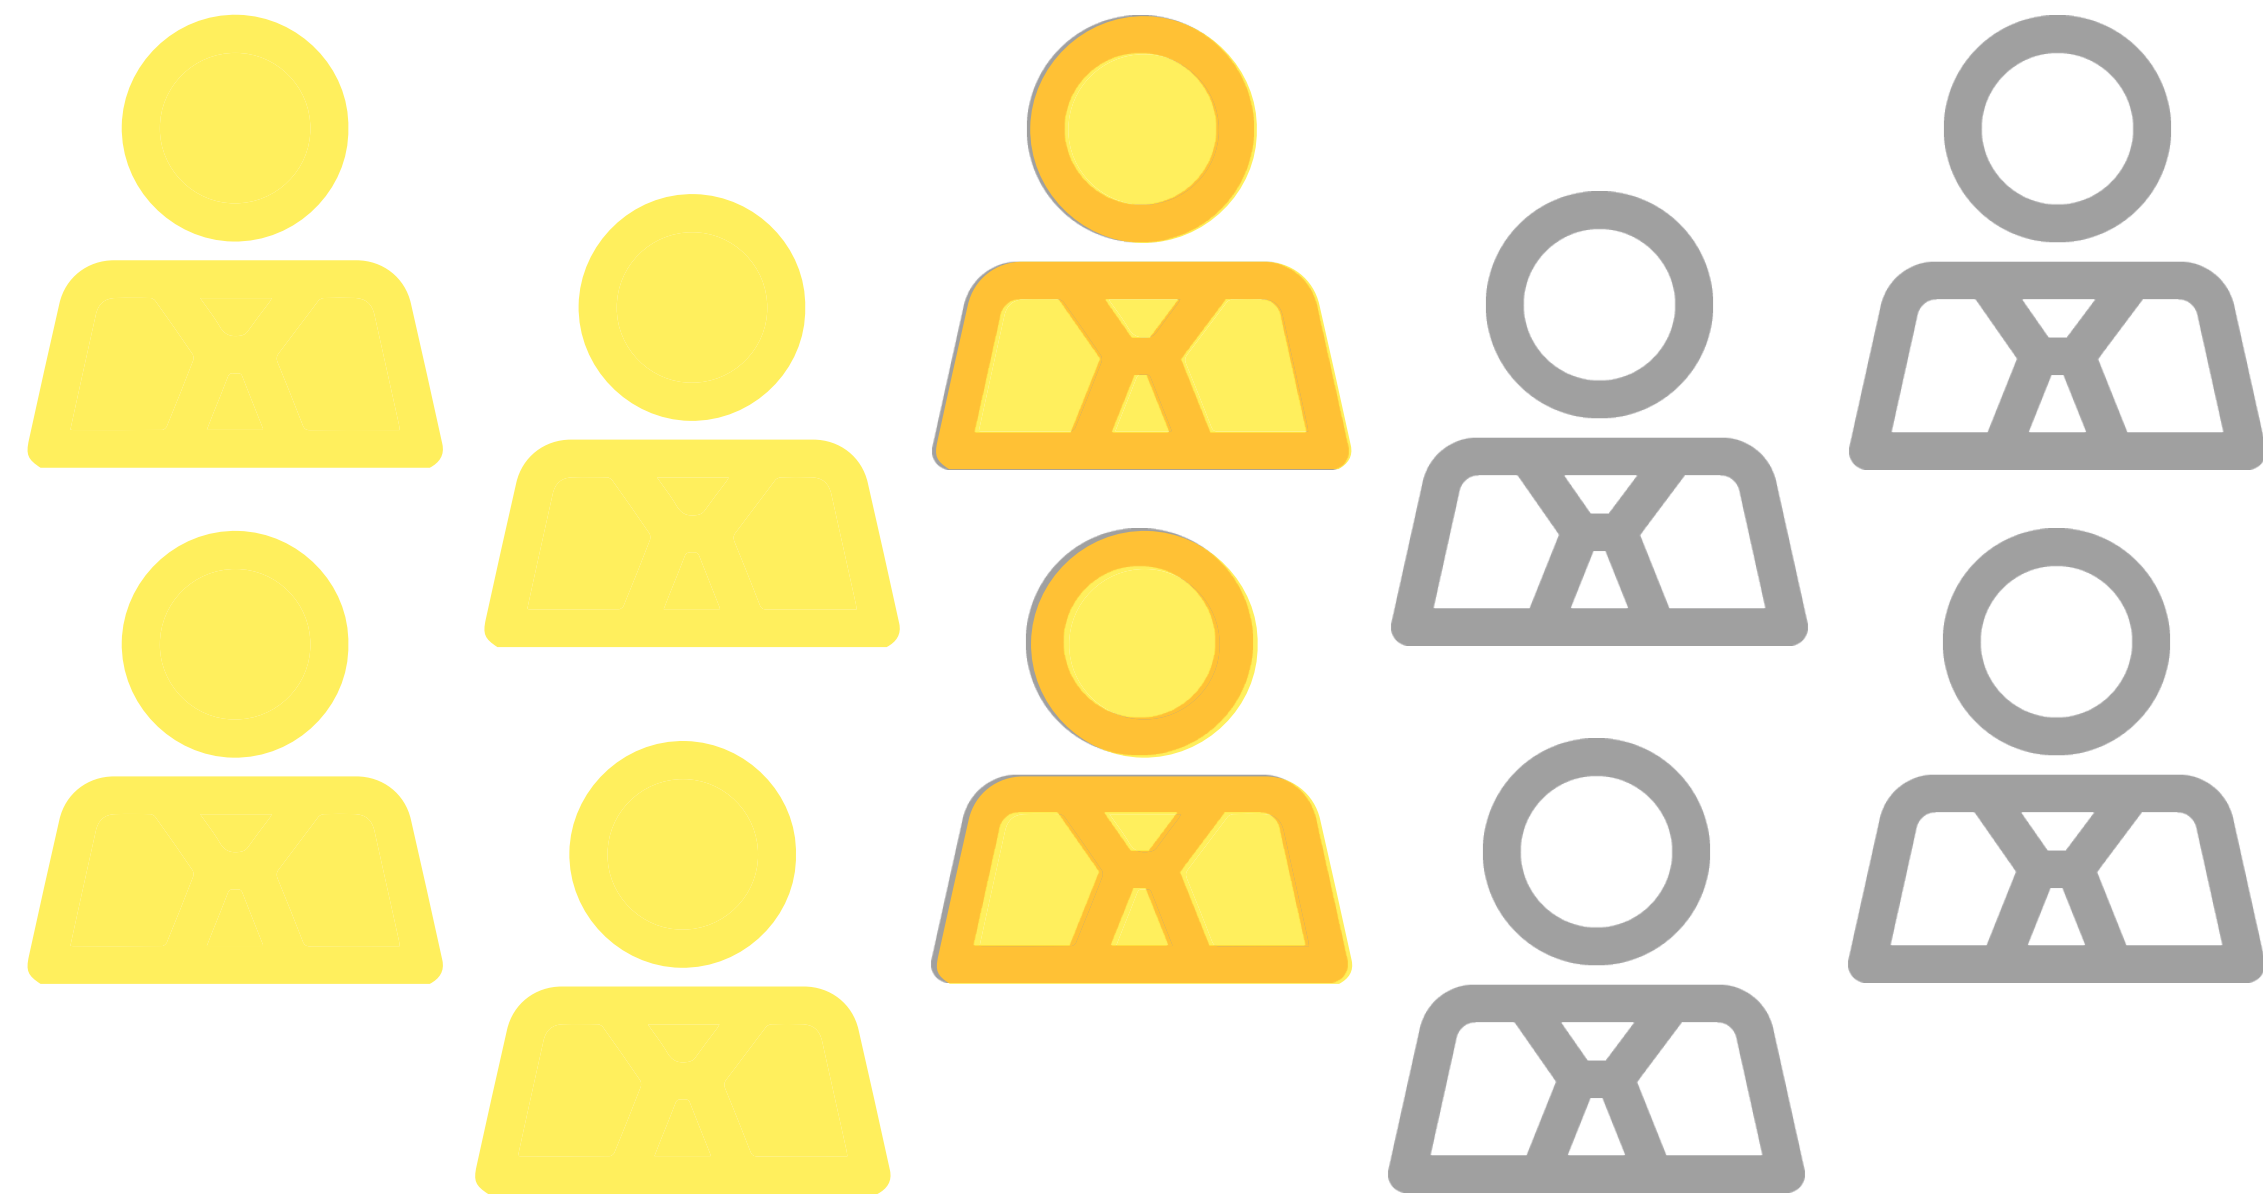

Despite the **high germ count** on the average desk...

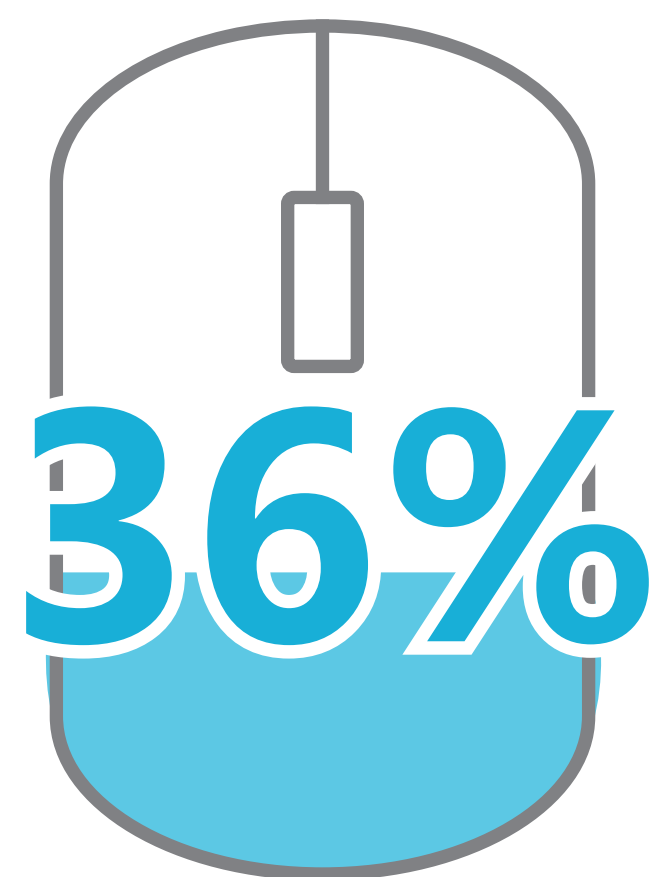

But only

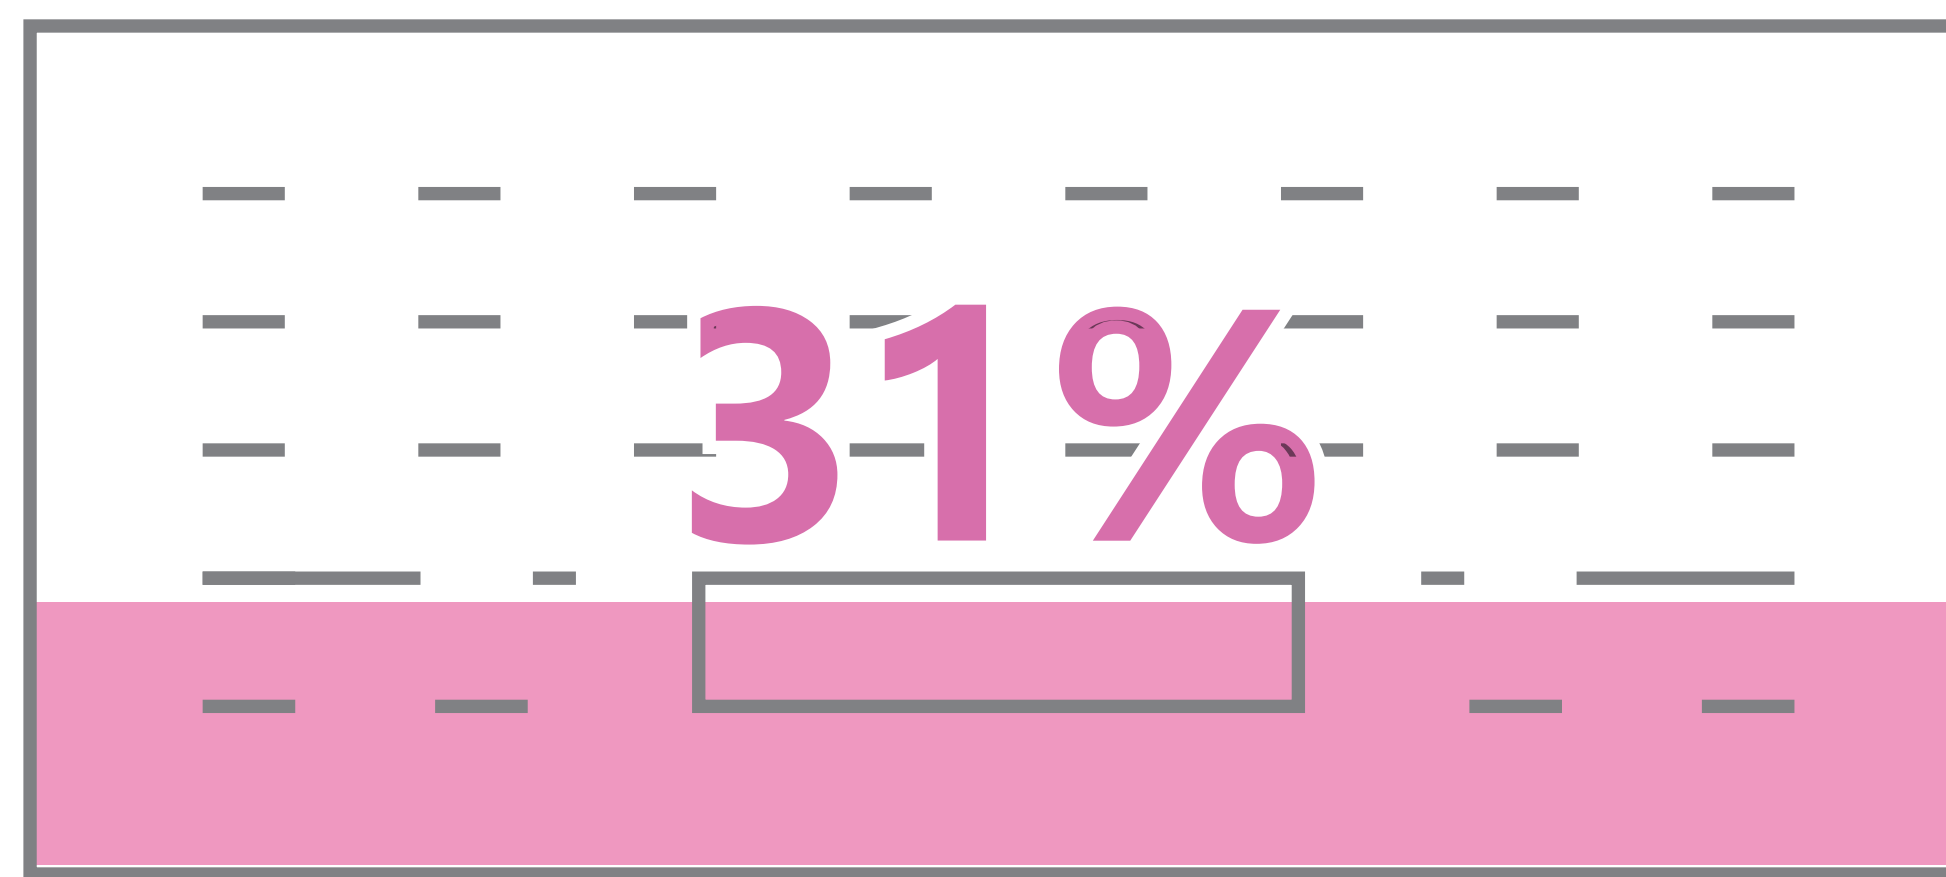

A 2014 study found that a virus sample placed in an office spread to **40-60%** of workers in just **2 hours**.

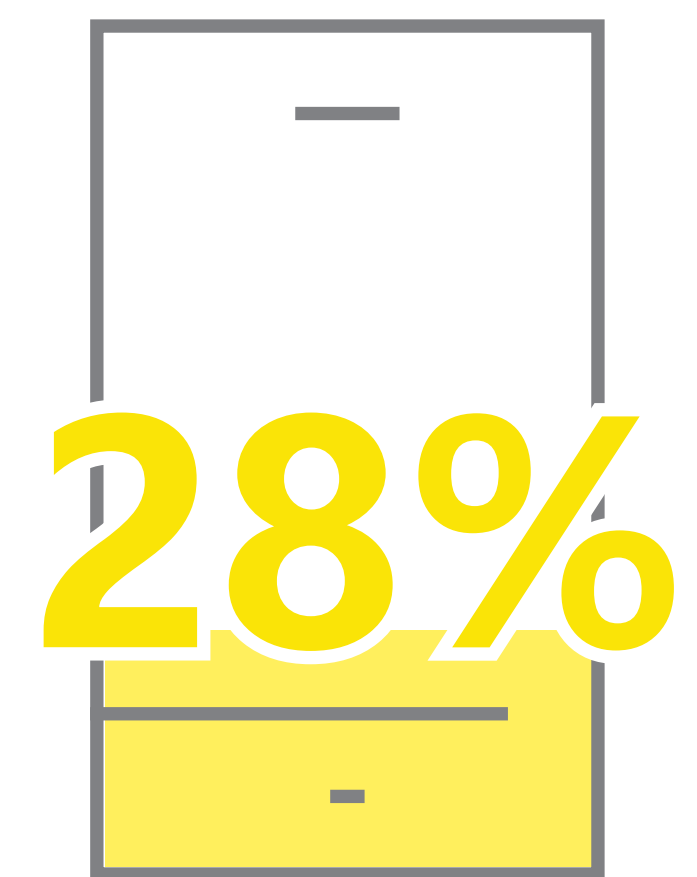

When members of the public workforce were surveyed

had never washed their mouse

had never washed their keyboard

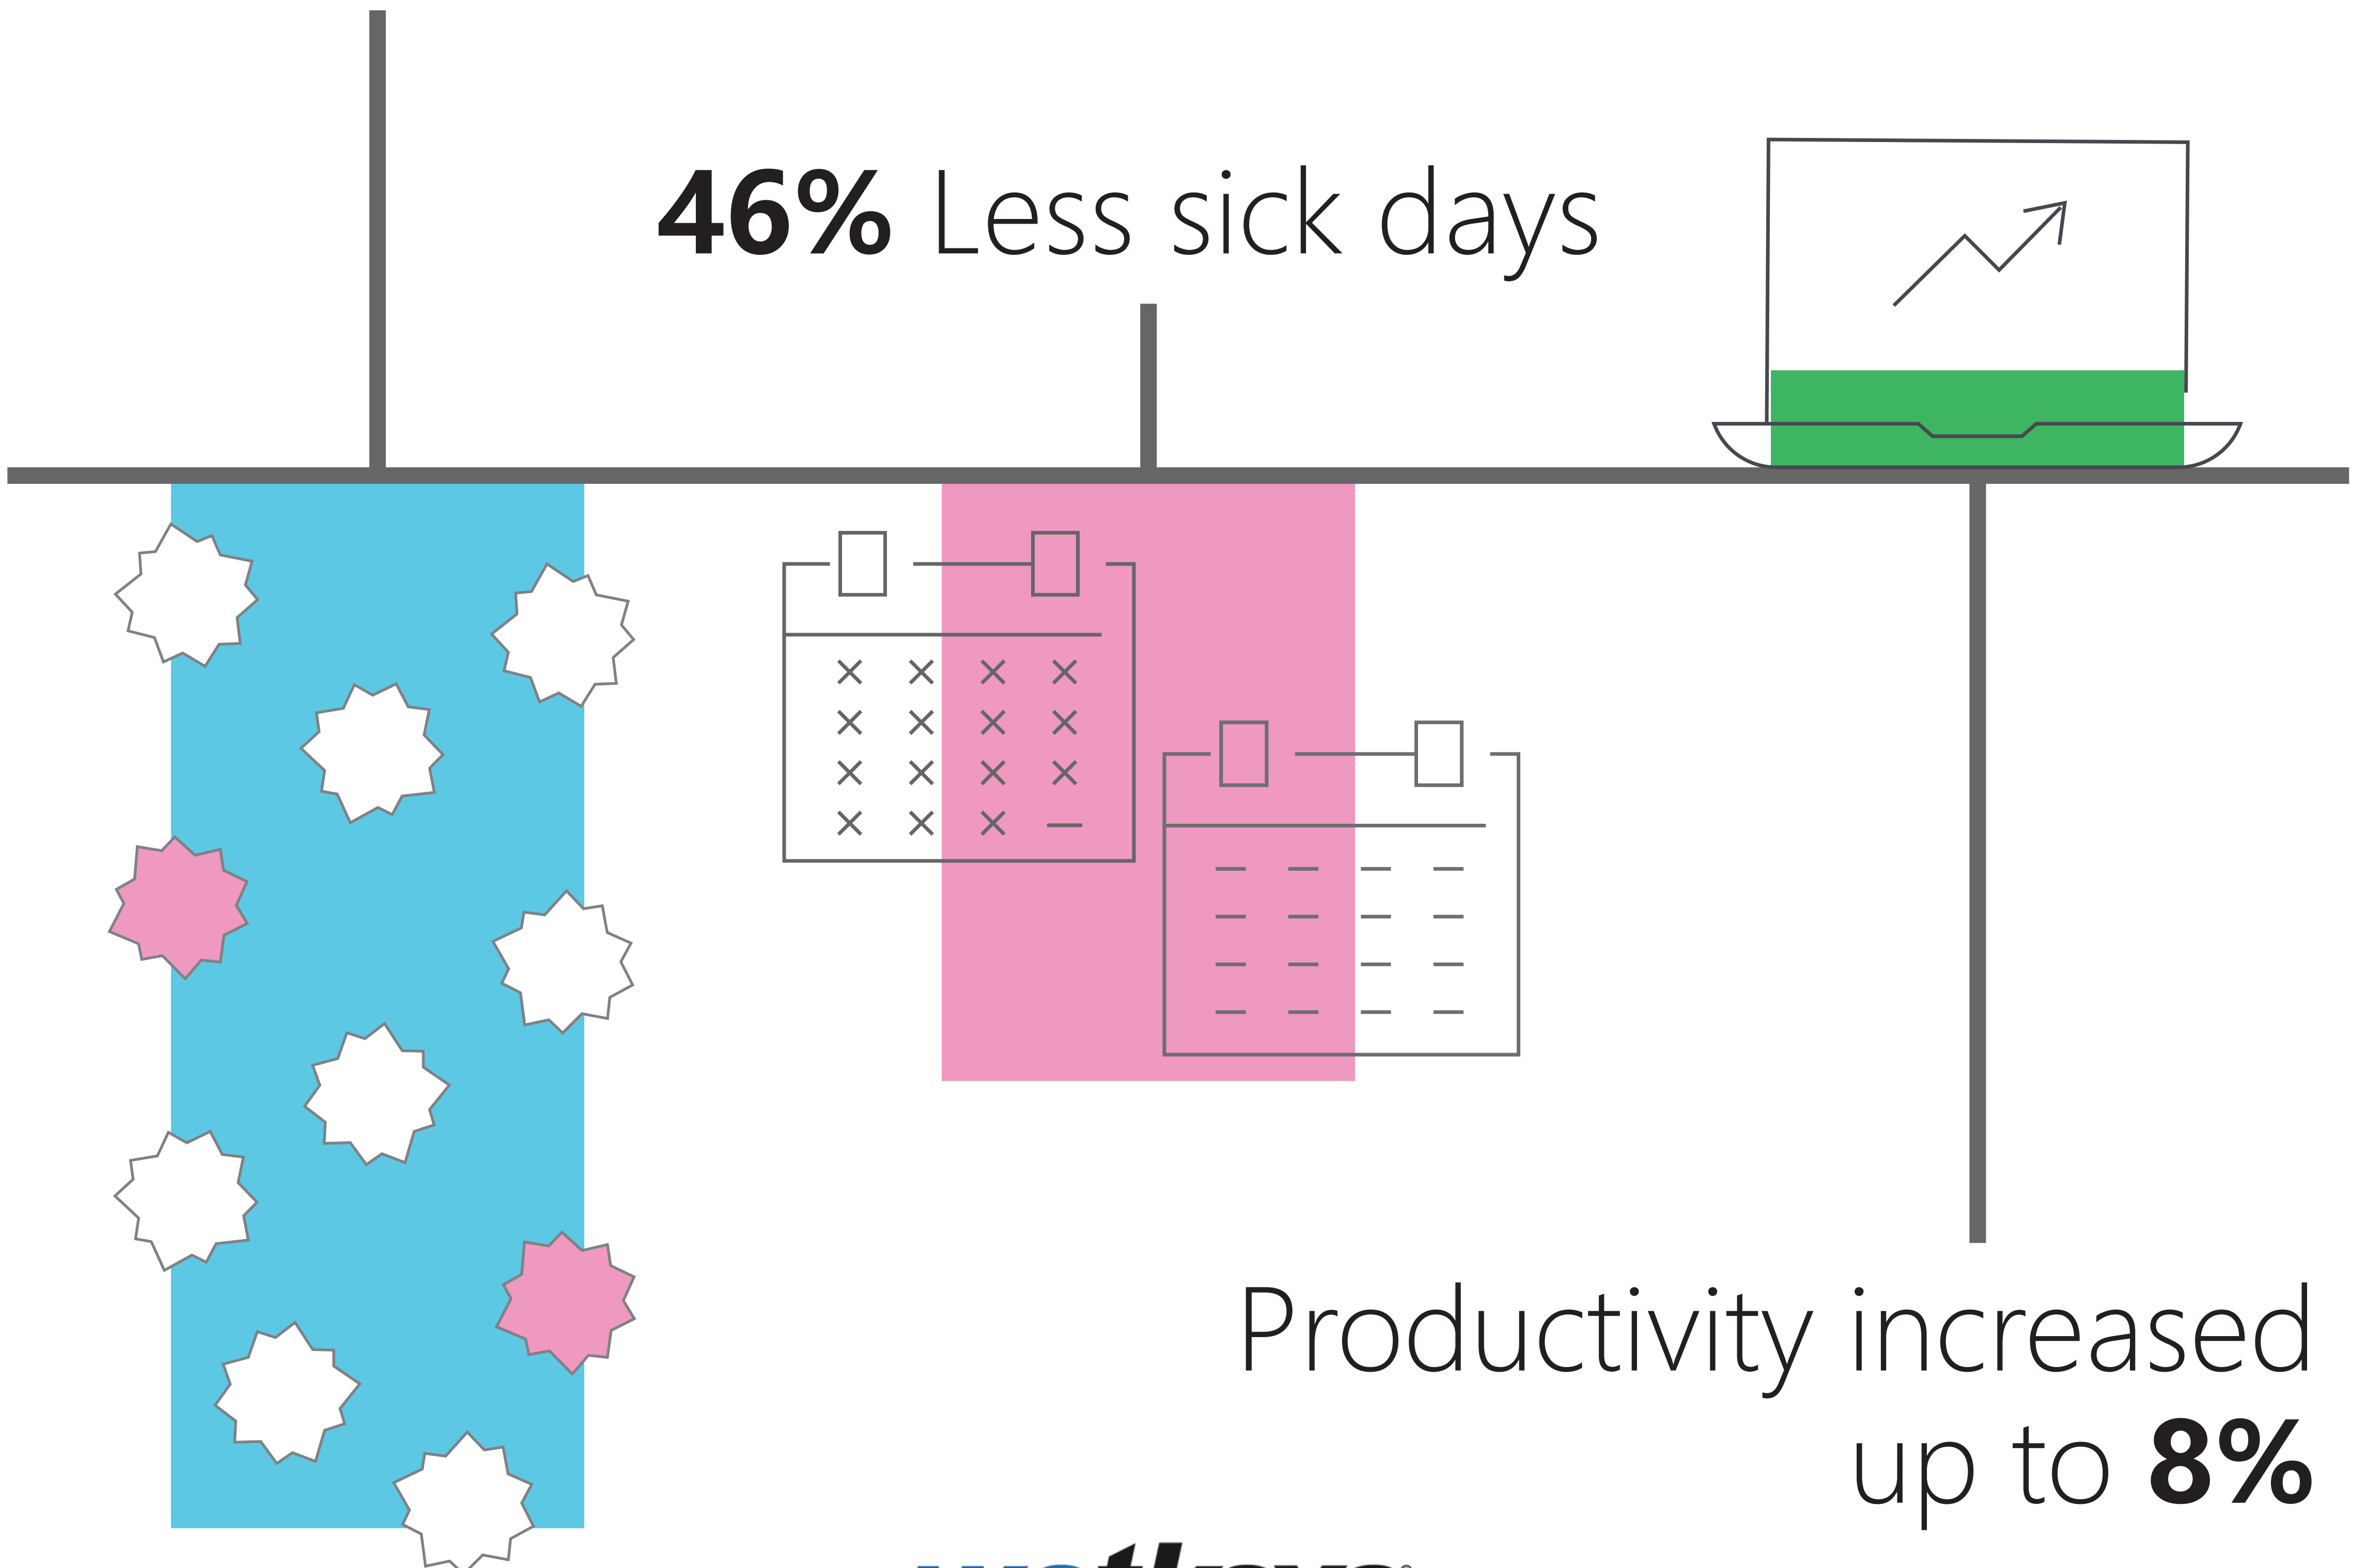

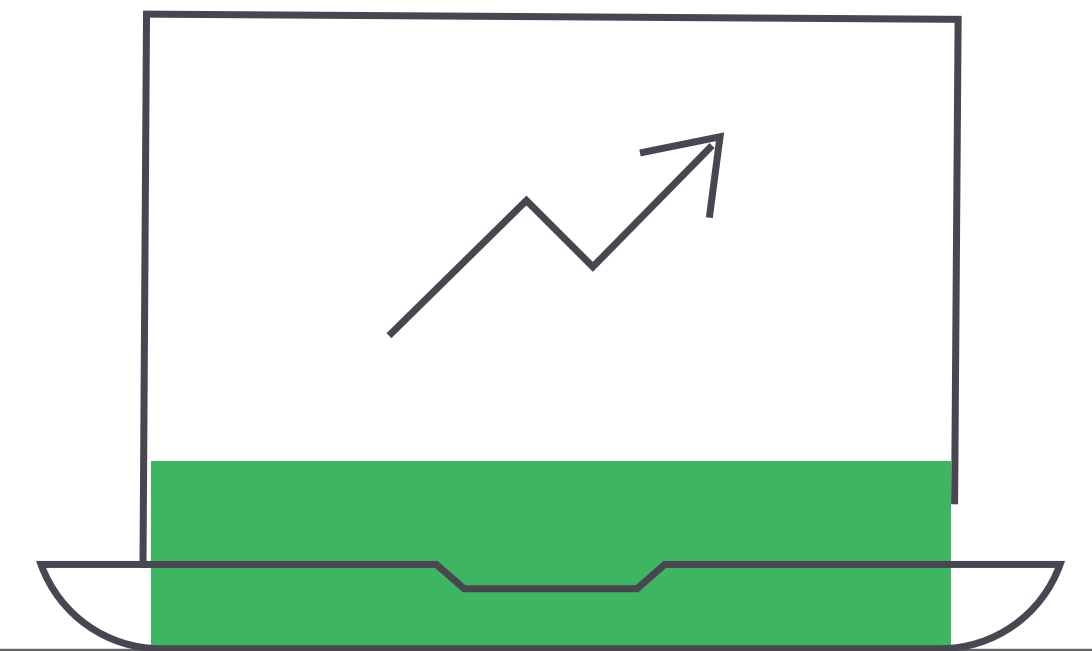

had never washed their phone

When workplaces are properly sanitized amazing things happen.

The risk of workers catching the cold and flu reduces by **80%**

46% Less sick days

Productivity increased up to **8%**

Annually U.S. businesses
spend over **\$40 Billion** on
computer peripherals and sick
days cost them over
\$225 Billion.

Get peripherals that last,
keep employees healthy and
lose less to sick days,
buy washable.
